What is London's Electric Vehicle Infrastructure Delivery Plan?

Our Electric vehicle infrastructure delivery plan, steered by the Mayor's EV Infrastructure Taskforce and published in 2019, identified how the public and private sectors could work together to ensure London has the right type and amount of charging infrastructure to serve London's needs to 2025.

What is London's EV charging infrastructure plan?

The plan highlights the requirement for extensive charging infrastructure to facilitate the uptake and usage of electric scooters, motorcycles, cars, vans and light trucks by Londoners and London's businesses. This draft strategy sets out the proposed approach to the deployment of charging infrastructure for privately-owned EVs up to 2015.

What is London's 2030 Electric Vehicle Infrastructure Strategy?

This is the executive summary of London's 2030 electric vehicle infrastructure strategy. With the phase out of petrol and diesel cars and vans by 2030, along with other influences, we must ensure that infrastructure delivery keeps up with demand.

What is London's EV delivery plan?

8 Assumes fuel economy of 30 miles per gallon and fuel price of GBP1.10 per litre. The Mayor's EV Delivery Plan was launched in May 2009 and sets out a comprehensive strategy to encourage electric vehicles in London. The Plan is grouped around three key themes: Infrastructure: The Plan sets a target of 25,000 charging points across London by 2015.

What is the EV infrastructure strategy?

This strategy sets out our vision, addresses recent trends and policy changes, estimates the infrastructure needs to 2030 and considers how this could be delivered. It outlines how far we have come in removing the barriers to implementing electric vehicle (EV) infrastructure and explores how the private and public sector can do more.

Does London need EV infrastructure?

Since we published the 2019 delivery plan, the delivery of EV infrastructure in London is well ahead of demand estimates, but we can see how demand is now rising rapidly.

The recent development of the UK's energy storage industry has drawn increasing attention from overseas practitioners, achieving significant progress in recent years. According ...

London Energy Storage Vehicle Plan

Dozens of clean energy projects will jump to the front of the queue for grid connections, through new measures in the Planning and Infrastructure Bill

Essentially the vehicle battery will be a form of distributed energy storage, and this deeper integration has potential for significantly increased ...

Pivot Power, Wartsila and Habitat Energy activate UK's first grid-scale battery storage system in Cowley on the outskirts of Oxford.

The project incorporates Tesla Megapack lithium-ion batteries. Image: TagEnergy. Renewable energy developer TagEnergy has energised ...

The plan outlines the mayor's plans to expand London's electric vehicle charging network and bring forward the ban on new petrol and diesel vehicles in London from 2040 to ...

The UK's largest battery energy storage system has gone live in North Yorkshire. Lakeside Energy Park is a 100MW facility in Drax, near ...

The 200MW BESS will help alleviate transmission line constraints and increase utilisation of renewable energy. Image: Getty Images. A 200MW ...

Local area energy planning translates net-zero targets into coordinated, on-the ground action for local areas. Find reports and evidence ...

One year on from the taskforce's creation they published the London EV Infrastructure Delivery Plan. [2] The plan recognised that current infrastructure was the largest barrier to large-scale ...

Today, the Taskforce launched a draft summary document (available on the website) of its 2030 strategy, on which the Mayor's office is seeking wider stakeholder ...

The London Plan sets forth stringent requirements for carbon emission reduction and energy efficiency in new developments. This ...

The UK government has published its 2025 Spending Review, outlining major public funding allocations across clean energy, sustainable ...

Charging Forward: Gigawatt scale UK battery approved, offshore wind and energy storage co-location, DC microgrids and more Energy Voice ...

This section focuses on electric vehicle (EV) charging infrastructure, planning and the UK's wider energy security and net-zero commitments.
